RELEAS NOTE

This release note provides information of schema changes to the Points of Interest product. These changes are effective as of the September 2019 release and follows customer communications which were sent in June 2019.

OS MasterMap Integrated Transport Network (ITN) product has been withdrawn and become a frozen dataset, with no ongoing updates or support. This has been replaced by OS MasterMap Highways Network. References in Points of Interest to an ITN TOID have been replaced with a Unique Street Reference Number (USRN). For Points of Interest this means a schema change whereby the following four attributes have been removed:

- ITN Easting
- ITN Northing
- ITN TOID
- ITN TOID Version

Two new attributes have been added to the product:

- USRN
- USRN Match Indicator

The new attributes that have been added to the product will have the following specification:

<table>
<thead>
<tr>
<th>USRN</th>
<th>Unique Street Reference Number (USRN)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Type: Integer</td>
<td>Size: 8</td>
</tr>
<tr>
<td></td>
<td>Multiplicity: [1]</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>USRN Match Indicator</th>
<th>The code which identifies the matching of the USRN to the Point of Interest</th>
</tr>
</thead>
<tbody>
<tr>
<td>Type: USRNMatchCode</td>
<td>Size: 1</td>
</tr>
<tr>
<td></td>
<td>Multiplicity: [1]</td>
</tr>
</tbody>
</table>

Full details of the new attributes can be found in the technical specification on the product support page.
