

# AddressBase® Islands Products April 2021

## Epoch 83 Release

### Release Note Version 1.0

*Northern Ireland, Channel Islands and Isle of Man Coverage.*

## Introduction

This release note provides information about the April 2021 release of AddressBase Islands. This product was released to customers on **April 1<sup>st</sup> 2021**.

## 1. Product counts

The following are product counts for the non-geographic chunked release of the AddressBase Islands products:

Product	Full Supply record count*	Change Only Update record count*
<b>AddressBase Plus Islands</b>	1,105,306	2,749
<b>AddressBase Premium Islands</b>		
Street	46,915	103
Street Descriptor	46,915	33
BLPU	1,176,951	2,942
Classification	1,176,951	886
LPI	1,185,171	1,060
Organisation	42,250	16
Delivery Point Address	930,710	1,793
Application Cross Ref.	1,245,196	1,375
Successor	0	0

\*these counts are based on a Managed Islands Set (MIS).

## 2. Changed Records

If you receive a Change Only Update (COU) supply for your AddressBase Islands product, you will receive Insert, Update and Delete records within the supplied file. The counts of these records can be found below –

### AddressBase Plus Islands -

Change Type	Count
Inserts	683
Updates	1,984
Deletes	82

## AddressBase Premium Islands -

	Inserts	Updates	Deletes
Street	33	70	0
Street Descriptor	33	0	0
BLPU	740	2,123	79
Classification	740	67	79
LPI	740	241	79
Organisation	0	0	16
Delivery Point Address	1,232	314	247
Application Cross Ref.	716	515	144

### 3. Source data currency

The following information relates to the currency of the source data used in the creation of Epoch 83:

Data Source	Date
<b>Pointer (Northern Ireland)</b>	25 January 2021
<b>DigiMap (Channel Islands)</b>	16 February 2021
<b>Isle of Man</b>	2 October 2020
<b>Royal Mail PAF</b>	2 March 2021

### 4. Data Issues

#### ***AddressBase Plus Islands Issues***

##### **Affected output formats: GML**

##### **a. Incorrect namespace for specification version**

We have identified that the namespaces relating to the AddressBase schema have accidentally been replaced for AddressBase Islands. This is due to the specification for AddressBase having changed, though this change did not affect AddressBase Islands.

Further consultation since the last release has resulted in our position changing in terms of misaligning the schema versions for AddressBase and AddressBase Islands. Our intention now is to increment the schema version used for AddressBase Islands to 2.1 as is currently, albeit wrongly, the case.

We will issue further communications alongside the amended specification for this. Please note that aside from a new schema specification number there will be no breaking change in the update. RPC code values will remain identical to current ones, though their definition wording will change.

As the change is not a breaking one, loading processes can safely ignore the version change for the time being or edit the GML files manually and change all references to mentioning AddressBase versions 2.1 to 2.0 in the GML headers.

Changes are highlighted below:

```
<?xml version="1.0" encoding="UTF-8"?>

```

## Affected output formats: CSV and GML

### a. Missing Parent UPRNs

1,271 records which exist in AddressBase Plus Islands declare a Parent UPRN which cannot be found in product. This is because of the background logic used to create the product and this will be reviewed in the future.

## **AddressBase Premium Islands Issues**

### Affected output formats: GML

#### a. Incorrect namespace for specification version

We have identified that the namespaces relating to the AddressBase schema have accidentally been replaced for AddressBase Islands. This is due to the specification for AddressBase having changed, though this change did not affect AddressBase Islands.

Further consultation since the last release has resulted in our position changing in terms of misaligning the schema versions for AddressBase and AddressBase Islands. Our intention now

is to increment the schema version used for AddressBase Islands to 2.1 as is currently, albeit wrongly, the case.

We will issue further communications alongside the amended specification for this. Please note that aside from a new schema specification number there will be no breaking change in the update. RPC code values will remain identical to current ones, though their definition wording will change.

As the change is not a breaking one, loading processes can safely ignore the version change for the time being or edit the GML files manually and change all references to mentioning AddressBase versions 2.1 to 2.0 in the GML headers.

Changes are highlighted below:

```

## Affected output formats: CSV and GML

### a. Street Incorrect Coordinates –

There are 143 Streets which have incorrect start or end coordinates of 000000. The unique identifiers can be provided upon request through your Relationship Manager.

## 5. Next release

The next release of AddressBase, Epoch 84, is schedule for release on 13<sup>th</sup> May 2021.
