

AddressBase® Islands Products August 2020 Epoch 78 Release

Release Note Version 1.0

Northern Ireland, Channel Islands and Isle of Man Coverage.

Introduction

This release note provides information about the August 2020 release of AddressBase Islands. This product was released to customers on **August 27th 2020**.

1. Product counts

The following are product counts for the non-geographic chunked release of the AddressBase Islands products:

Product	Full Supply record count*	Change Only Update record count*
AddressBase Plus Islands	1,100,873	2,567
AddressBase Premium Islands		
Street	46,690	78
Street Descriptor	46,690	28
BLPU	1,172,490	2,672
Classification	1,172,490	1,137
LPI	1,180,652	1,468
Organisation	42,350	37
Delivery Point Address	926,563	764
Application Cross Ref.	1,240,778	1,263
Successor	0	0

*these counts are based on a Managed Islands Set (MIS).

2. Changed Records

If you receive a Change Only Update (COU) supply for your AddressBase Islands product, you will receive Insert, Update and Delete records within the supplied file. The counts of these records can be found below –

AddressBase Plus Islands -

Change Type	Count
Inserts	890
Updates	1,622
Deletes	55

AddressBase Premium Islands -

	Inserts	Updates	Deletes
Street	28	50	0
Street Descriptor	28	0	0
BLPU	832	1,786	54
Classification	832	251	54
LPI	864	550	54
Organisation	29	1	7
Delivery Point Address	627	86	51
Application Cross Ref.	1,005	178	80

3. Source data currency

The following information relates to the currency of the source data used in the creation of Epoch 78:

Data Source	Date
Pointer (Northern Ireland)	20 July 2020
DigiMap (Channel Islands)	14 July 2020
Isle of Man	12 July 2020
Royal Mail PAF	24 July 2020

4. Data Issues

AddressBase Plus Islands Issues

Affected output formats: GML

a. Incorrect namespace for specification version

We have identified that the namespaces relating to the AddressBase schema have accidentally been replaced for AddressBase Islands. This is due to the specification for AddressBase having changed, though this change did not affect AddressBase Islands.

Further consultation since the last release has resulted in our position changing in terms of misaligning the schema versions for AddressBase and AddressBase Islands. Our intention now is to increment the schema version used for AddressBase Islands to 2.1 as is currently, albeit wrongly, the case.

We will issue further communications alongside the amended specification for this. Please note that aside from a new schema specification number there will be no breaking change in the update. RPC code values will remain identical to current ones, though their definition wording will change.

As the change is not a breaking one, loading processes can safely ignore the version change for the time being or edit the the GML files manually and change all references to mentioning AddressBase versions 2.1 to 2.0 in the GML headers.

Changes are highlighted below:

```
<?xml version="1.0" encoding="UTF-8"?>

```

Affected output formats: CSV and GML

a. Missing Parent UPRNs

1,146 records which exist in AddressBase Plus Islands declare a Parent UPRN which cannot be found in product. This is because of the background logic used to create the product and this will be reviewed in the future.

AddressBase Premium Islands Issues

Affected output formats: GML

a. Incorrect namespace for specification version

We have identified that the namespaces relating to the AddressBase schema have accidentally been replaced for AddressBase Islands. This is due to the specification for AddressBase having changed, though this change did not affect AddressBase Islands.

Further consultation since the last release has resulted in our position changing in terms of misaligning the schema versions for AddressBase and AddressBase Islands. Our intention now

is to increment the schema version used for AddressBase Islands to 2.1 as is currently, albeit wrongly, the case.

We will issue further communications alongside the amended specification for this. Please note that aside from a new schema specification number there will be no breaking change in the update. RPC code values will remain identical to current ones, though their definition wording will change.

As the change is not a breaking one, loading processes can safely ignore the version change for the time being or edit the the GML files manually and change all references to mentioning AddressBase versions 2.1 to 2.0 in the GML headers.
