

# AddressBase® Islands Products July 2020

## Epoch 77 Release

### Release Note Version 1.0

*Northern Ireland, Channel Islands and Isle of Man Coverage.*

## Introduction

This release note provides information about the July 2020 release of AddressBase Islands. This product was released to customers on **July 16<sup>th</sup> 2020**.

## 1. Product counts

The following are product counts for the non-geographic chunked release of the AddressBase Islands products:

Product	Full Supply record count*	Change Only Update record count*
<b>AddressBase Plus Islands</b>	1,100,038	2,726
<b>AddressBase Premium Islands</b>		
Street	46,662	64
Street Descriptor	46,662	18
BLPU	1,171,712	2,955
Classification	1,171,712	967
LPI	1,179,842	1,211
Organisation	42,328	208
Delivery Point Address	925,987	1,188
Application Cross Ref.	1,239,853	901
Successor	0	0

\*these counts are based on a Managed Islands Set (MIS).

## 2. Changed Records

If you receive a Change Only Update (COU) supply for your AddressBase Islands product, you will receive Insert, Update and Delete records within the supplied file. The counts of these records can be found below –

### AddressBase Plus Islands -

Change Type	Count
Inserts	622
Updates	2,058
Deletes	46

## AddressBase Premium Islands -

	Inserts	Updates	Deletes
Street	18	46	0
Street Descriptor	18	0	0
BLPU	649	2,259	47
Classification	649	271	47
LPI	649	515	47
Organisation	193	5	10
Delivery Point Address	786	338	64
Application Cross Ref.	800	35	66

### 3. Source data currency

The following information relates to the currency of the source data used in the creation of Epoch 76:

Data Source	Date
<b>Pointer (Northern Ireland)</b>	8 June 2020
<b>DigiMap (Channel Islands)</b>	11 May 2020
<b>Isle of Man</b>	17 April 2020
<b>Royal Mail PAF</b>	12 June 2020

### 4. Data Issues

#### ***AddressBase Plus Islands Issues***

##### **Affected output formats: GML**

##### **a. Incorrect namespace for specification version**

We have identified that the namespaces relating to the AddressBase schema have accidentally been replaced for AddressBase Islands. This is due to the specification for AddressBase having changed, though this change did not affect AddressBase Islands.

Further consultation since the last release has resulted in our position changing in terms of misaligning the schema versions for AddressBase and AddressBase Islands. Our intention now is to increment the schema version used for AddressBase Islands to 2.1 as is currently, albeit wrongly, the case.

We will issue further communications alongside the amended specification for this. Please note that aside from a new schema specification number there will be no breaking change in the update. RPC code values will remain identical to current ones, though their definition wording will change.

As the change is not a breaking one, loading processes can safely ignore the version change for the time being or edit the the GML files manually and change all references to mentioning AddressBase versions 2.1 to 2.0 in the GML headers.

Changes are highlighted below:

```
<?xml version="1.0" encoding="UTF-8"?>

```

## Affected output formats: CSV and GML

### a. Missing Parent UPRNs

1,159 records which exist in AddressBase Plus Islands declare a Parent UPRN which cannot be found in product. This is because of the background logic used to create the product and this will be reviewed in the future.

## AddressBase Premium Islands Issues

### Affected output formats: GML

#### a. Incorrect namespace for specification version

We have identified that the namespaces relating to the AddressBase schema have accidentally been replaced for AddressBase Islands. This is due to the specification for AddressBase having changed, though this change did not affect AddressBase Islands.

Further consultation since the last release has resulted in our position changing in terms of misaligning the schema versions for AddressBase and AddressBase Islands. Our intention now

is to increment the schema version used for AddressBase Islands to 2.1 as is currently, albeit wrongly, the case.

We will issue further communications alongside the amended specification for this. Please note that aside from a new schema specification number there will be no breaking change in the update. RPC code values will remain identical to current ones, though their definition wording will change.

As the change is not a breaking one, loading processes can safely ignore the version change for the time being or edit the the GML files manually and change all references to mentioning AddressBase versions 2.1 to 2.0 in the GML headers.

Changes are highlighted below:

```
