

AddressBase® Islands Products November 2019 Epoch 71 Release

Release Note Version 1.0

Northern Ireland, Channel Islands and Isle of Man Coverage.

Introduction

This release note provides information about the November 2019 release of AddressBase Islands.

This product was released to customers on **November 6th 2019**.

1. Product counts

The following are product counts for the non-geographic chunked release of the AddressBase Islands products:

Product	Full Supply record count*	Change Only Update record count*
AddressBase Plus Islands	1,096,173	11,693
AddressBase Premium Islands		
Street	46,442	74
Street Descriptor	46,442	28
BLPU	1,166,984	11,969
Classification	1,166,984	2,226
LPI	1,174,855	3,530
Organisation	42,125	42
Delivery Point Address	921,982	2,087
Application Cross Ref.	1,234,547	1,162
Successor	0	0

*these counts are based on a Managed Islands Set (MIS).

2. Changed Records

If you receive a Change Only Update (COU) supply for your AddressBase Islands product, you will receive Insert, Update and Delete records within the supplied file. The counts of these records can be found below –

AddressBase Plus Islands -

Change Type	Count
Inserts	1,666
Updates	9,872
Deletes	155

AddressBase Premium Islands -

	Inserts	Updates	Deletes
Street	27	46	1
Street Descriptor	27	0	1
BLPU	908	10,968	93
Classification	908	1,225	93
LPI	1,038	2,398	94
Organisation	4	2	36
Delivery Point Address	1,267	527	293
Application Cross Ref.	941	89	132

3. Source data currency

The following information relates to the currency of the source data used in the creation of Epoch 71:

Data Source	Date
Pointer (Northern Ireland)	30 September 2019
DigiMap (Channel Islands)*	13 August 2019
Isle of Man	20 September 2019
Royal Mail PAF	04 October 2019

*This currency date is with regards to Guernsey. Jersey information has a currency of 27th June 2019.

4. Data Issues

AddressBase Plus Islands Issues

Affected output formats: GML

a. Incorrect namespace for specification version

We have identified that the namespaces relating to the AddressBase schema have accidentally been replaced for AddressBase Islands. This is due to the specification for AddressBase having changed, though this change did not affect AddressBase Islands.

Further consultation since the last release has resulted in our position changing in terms of misaligning the schema versions for AddressBase and AddressBase Islands. Our intention now is to increment the schema version used for AddressBase Islands to 2.1 as is currently, albeit wrongly, the case.

We will issue further communications alongside the amended specification for this. Please note that aside from a new schema specification number there will be no breaking change in the update. RPC code values will remain identical to current ones, though their definition wording will change.

As the change is not a breaking one, loading processes can safely ignore the version change for the time being or edit the the GML files manually and change all references to mentioning AddressBase versions 2.1 to 2.0 in the GML headers.

Changes are highlighted below:

```

<?xml version="1.0" encoding="UTF-8"?>

```

Affected output formats: CSV and GML

a. Missing Parent UPRNs

1,028 records which exist in AddressBase Plus Islands declare a Parent UPRN which cannot be found in product. This is because of the background logic used to create the product and this will be reviewed in the future.

AddressBase Premium Islands Issues

Affected output formats: GML

a. Incorrect namespace for specification version

We have identified that the namespaces relating to the AddressBase schema have accidentally been replaced for AddressBase Islands. This is due to the specification for AddressBase having changed, though this change did not affect AddressBase Islands.

Further consultation since the last release has resulted in our position changing in terms of misaligning the schema versions for AddressBase and AddressBase Islands. Our intention now is to increment the schema version used for AddressBase Islands to 2.1 as is currently, albeit wrongly, the case.

We will issue further communications alongside the amended specification for this. Please note that aside from a new schema specification number there will be no breaking change in the update. RPC code values will remain identical to current ones, though their definition wording will change.

As the change is not a breaking one, loading processes can safely ignore the version change for the time being or edit the the GML files manually and change all references to mentioning AddressBase versions 2.1 to 2.0 in the GML headers.
