

# Code-Point with Polygons – Release Note

## January 2025

This release note provides information about the January 2025 release of Code-Point with Polygons.

### Update to the location of Code-Point with Polygons technical documentation and release notes

Code-Point with Polygons product technical documentation (including the release notes, overview, getting started guide and technical specification) is now available on the new [OS Download Products' Documentation Platform](https://docs.os.uk/os-downloads) (<https://docs.os.uk/os-downloads>). This platform is the new central location for all technical documentation for OS Premium and OpenData Download products (such as AddressBase, OS MasterMap Topography Layer, OS Open UPRN, etc.).

Over the next few months, the old PDFs containing product technical documentation will be removed from the Code-Point with Polygons product pages of the OS corporate website and replaced by links to the refreshed documentation on the new platform.

[Release notes for Code-Point with Polygons products are available on the new platform](https://docs.os.uk/os-downloads/addressing-and-location/code-point-with-polygons/release-notes) ([docs.os.uk/os-downloads/addressing-and-location/code-point-with-polygons/release-notes](https://docs.os.uk/os-downloads/addressing-and-location/code-point-with-polygons/release-notes)). Simply navigate to the Download products' platform and click *Addressing and Location > Code-Point with Polygons > Release Notes*. Static PDF release notes for Code-Point with Polygons previously published on the OS corporate website will be replaced by digital release notes held on the new platform over the next few months.

### Product issues and enhancements

- The table labelled 'layer\_styles' has been removed from GeoPackage format.
- The additional integer column 'id' will be removed from the table found in 'GEOPACKAGE\_AB\_ZE' to adhere to the product technical specification. This will mean 'fid' is the only integer present.
